- Inventory Consolidation
- Inventory Relocation
- “Clean Up” / Organization Projects
- Excess/Obsolete Management
- Critical Spares Management
- Bar Code and Re-labeling

Space Optimization

How much inventory is really needed to keep your operation running? Will it all fit into the space allocated? Meet OSHA requirements? Incorporate 5S best practices? Let PM2’s experts design your space for maximum efficiency.

Do you have a storage problem or is it an inventory problem?

Warehouse Set Up

Whether you are relocating, consolidating, or reorganizing your inventory, establishing a proper foundation is essential. PM2 will analyze your inventory needs based on throughput and physical space, design a plan for each item, and ensure that it is properly labeled, counted, and accurately represented in your inventory management system. Additionally, we will help dispose of what you don’t need. You will operate more efficiently and free up money that can be allocated to other priorities.

**Put your
inventory
dollars
to work!**

Warehouse Management Services & Tools

PM2 Control Center software harnesses the power of eMaint, the award winning world leader in On Demand CMMS software, and surrounds it with PM2’s inventory management services to bring you a 360° solution.

Warehouse Management

Born out of customer demand, PM2 offers warehouse management, **done differently!** Savings are realized through operational efficiencies, reduced downtime, and having less money tied up in inventory. Let PM2 manage your day-to-day warehouse operations, applying “5S” best practices as we go. Your cost will go down as your bottom line goes up. You’ll never want to go back to managing it yourself.

Software & Hardware Solutions

PM2 will help you take full advantage of the hardware and software you already own or recommend the right mix of software, hardware, and processes to get the job done. Whether your project requires bar coding, scanners, PDA’s, printers, or dispensing equipment, PM2 will help you find the right mix for your unique needs and assist with the process of incorporating it into your environment.

Let PM2 help you see your warehouse with new clarity!

Database Services

Inventory Databases

PM2 builds high quality inventory databases from your real shelf inventory, purchasing files, and existing inventory data. We ensure the appropriate identifying and purchasing information is associated with each item and provide tools and systems to maintain it.

PM2 can help you regain tight control of your inventory.

Catalog Content Services

Good catalog content is critical to running efficiently and maximizing the bottom line. Poor content results in lost profits, excess returns, increased labor and shipping costs, and ultimately, lost customers. PM2 will apply our broad industry knowledge to your catalog content needs so you can begin to realize the profits you deserve. Let PM2 help you give your customers an easy and productive item selection experience.

**Let us show
you what
your system
can do.**

- Inventory Database Development
- Item Description Standardization
- Bill of Material Development
- Enterprise Inventory Sharing
- Bin Location Management
- Critical Spare Designation

“As the Item Database Manager, I appreciate others that understand the great importance of quality structured data, as well as PM2’s commitment to customer service.”

– Smurfit Stone Container

- Competitive Product Search
- UNSPSC Coding
- Cross Referencing
- Attribute Ranking
- Catalog Content Build

Consulting Services

Inventory Consulting

Investments in materials management yield large returns when they are appropriately focused. After reviewing your current inventory management environment and understanding what your goals are, PM2 will develop strategies and solutions to help you reach them.

Project Plan Implementation

Whether you need a high level road map, a detailed analysis for making informed decisions, or an inventory optimization plan, PM2 will develop and implement a strategic plan that ensures maximum return on investment. Additionally, PM2 can help you deliver on scopes of work that you have developed in-house.

Let PM2 customize and implement a solution to solve your toughest inventory problems.

- Site Audit
- Inventory Cost Analysis
- Supplier Rationalization
- Return On Investment Analysis
- Value Analysis
- Strategy Development
- Process Design and Training
- Bill of Material Development
- Preventive Maintenance Set Up
- Process Management Training

Spend Less

Why PM2?

When you look at your inventory, what do you see?

PM2 helps you establish a vision for your company's materials management operation and then builds a solid foundation so you can achieve that vision and grow into the future.

We specialize in inventory and only inventory.

Our processes are proven. Our experience is solid.

Proven Experience

PM2 has brought quality solutions to a wide range of industries and has applied time-tested inventory management principles to meet a vast array of management challenges. Whether your materials management needs are large or small, narrow or broad, PM2 will deliver high quality and cost-effective solutions to help you achieve your objectives and produce real cost savings.

Control More

The Bottom Line

In the end, PM2 will save you money, significant money. Through tighter management and deeper inventory knowledge, our clients have seen stock-outs reduced by 75% or more, translating into greater plant uptime and output. Spend reduction and productivity enhancements produce savings that go directly to the bottom line. PM2 clients often see a return on their investment in as little as three months.

**That is real control,
providing real savings.**

Key Benefits

- **Significant ROI** right away, often within months of implementation
- **Measurable spend avoidance** producing savings immediately
- **Increased inventory turns**, sometimes doubling or tripling initial rates
- **Less overall inventory** resulting in significant cost reduction
- **More efficient work environment**
- **Process and product cost savings**
- **More accurate reporting** as a result of more accurate data
- **Better decisions** based on easy to access and credible information
- **Systems that "talk to each other"** reducing process time and double entry
